Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

Persona: Rahul (College Student / Final Year BCA)

SAYS "I have too many chapters to cover and not enough time." "I wish someone could just summarize these long PDFs for me." "Making flashcards takes forever — I spend more time making them than revising."	THINKS "Am I studying the right topics? What if I miss something important?" "There must be a smarter way to prepare — maybe AI can help." "If I had a clear study plan, I could manage my time better."
DOES - Reads through long chapters and tries to highlight key points manually - Creates handwritten flashcards but often gives up halfway - Searches YouTube and Google for topic summaries instead of making his own	FEELS - Overwhelmed — Too much study material, too little time - Anxious — Fear of missing important topics before exams - Frustrated — Spending hours on repetitive tasks like note-making
